State Route 88 Pine Grove Improvements Project

Project Future

The purpose of this phase, Phase II, of the Project Approval and Environmental Documentation (PA/ED) process is to perform preliminary engineering to support the preparation and approval of a Project Report and an Environmental Document. Phase II will refine the through town project alternative and ensure it still meets all aspects of the project Purpose and Need. The goal of the refined alternative will be to alleviate congestion, improve operations, and enhance safety, while staying within the existing Right-of-Way and avoiding adverse impacts to the community and environments as much as possible.

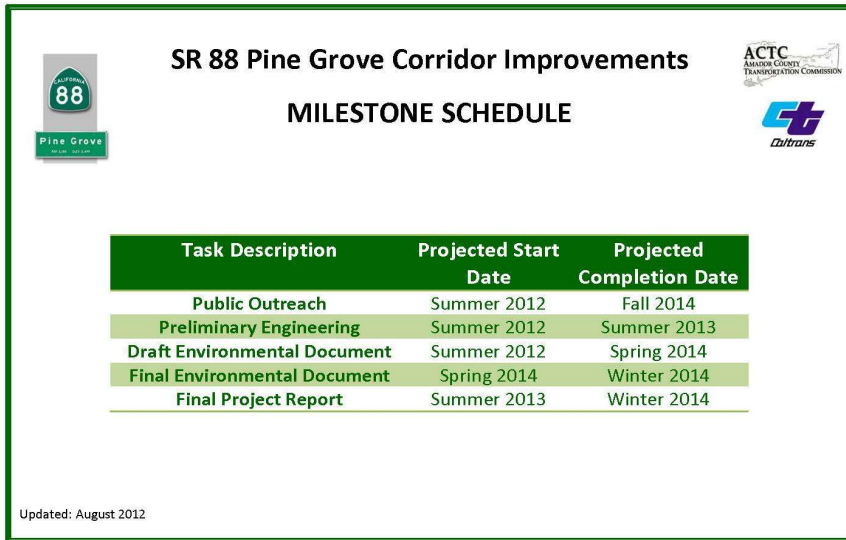

The design team will perform preliminary engineering and environmental technical studies in order to prepare a draft Environmental Document and draft Project Report. The design team will seek community input through public meetings, one-on-one meetings with business and property owners, and through a Stakeholder Working Group that includes local representatives. Community input will be an ongoing effort throughout the entire Phase 2 of the project.

Do you have input you would like to submit now? [Click here](#) or go to our "Input" page to submit a comment. See the

“Project Development Process” below for more details on the PA/ED process. For dates of these activities see the “Project Schedule” page.

The design team has prepared a preliminary layout of the proposed improvements. This design was based on the input received during the alternative selection process, or Phase I of the PA/ED process. This design will be refined as the project progresses. See the project exhibit below.

Project Schedule

SR 88 Pine Grove Corridor Improvements
MILESTONE SCHEDULE

Task Description	Projected Start Date	Projected Completion Date
Public Outreach	Summer 2012	Fall 2014
Preliminary Engineering	Summer 2012	Summer 2013
Draft Environmental Document	Summer 2012	Spring 2014
Final Environmental Document	Spring 2014	Winter 2014
Final Project Report	Summer 2013	Winter 2014

Updated: August 2012

Phase II of the project began in August 2012. The preliminary engineering and environmental technical studies are underway. The draft Project Report and draft Environmental Document will be completed in the summer of 2013. The draft Environmental document is scheduled to be completed in the spring of 2014. The Final approved Environmental Document and Project Report are scheduled to be completed in the winter of 2014.
