UPDATE: [Public Meeting Tuesday, August 12, 2014](#)

Information on the public meeting can be found on our [Public Meeting Page](#)

Project Background

The State Route 88 Pine Grove Improvements Project has been in the Project Approval and Environmental Documentation (PA/ED) process for the past two years. Phase I of the PA/ED process was completed in October of 2011 thanks to the hard work of all parties involved. Phase I consisted of performing a Context Sensitive Solutions (CSS) alternatives screening process to determine what alternative(s) would be most beneficial to all stakeholders, based on the project's Purpose and Need.

Through this extensive alternatives screening and refinement process, it was determined that the best and most viable solution was to improve the existing highway rather than build an entirely new alignment.

The project is now moving onto Phase II of the PA/ED process. See the [Project Future](#) page for more information on Phase II
